(54) WASHING MACHINE

(57) Abstract:

PROBLEM TO BE SOLVED: To provide a washing machine which can perform washing without generating abnormal vibration by fixing simply shoes in a washing and dehydration tank and decreasing thereby splashes of water and water splashing sound.

SOLUTION: Shoes can be washed while splashes of water and water splashing sound are decreased during water supply and washing and without generating abnormal vibration during dehydration by storing a washing and dehydration tank 14 on the peripheral wall of which a plurality of dehydration holes 15 are formed in a water receiving tank 10 being elastically hung in an outer box 2 and supporting an uneven board 21 with a smooth outer surface on which shoes are fixed with a band, etc., by hooking a projection 28 projected on the outer peripheral part of this board 21 in a dehydration hole

15 in the washing and dehydration tank 14.
